

*ABSTRACT AMENDMENT*

Replace the Abstract with:

~~The screw-type~~ A threaded intraossal dental implant has a bottommost implant tip that is located in the apical area and ~~comprises~~ includes a root part which extends ~~up to said the~~ up to the implant tip and which is intended for insertion into a jaw bone. The implant neck extending up to the coronal area ~~is placed on~~ extends from the root part and is intended ~~for being to be~~ to be placed inside the gingivae. The outer thread on the root part is preferably self-cutting. ~~The invention is characterized in that the~~ root part ~~comprises~~ includes an essentially parabolic outer contour with the implant tip serving as the vertex. ~~The inventive~~ essentially parabolic outer contour makes it possible to obtain ~~an~~ improved primary stability and guarantees, to a great extent, the long-term success of the implant.
